DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gilding (4,049,506) in view of Evans (4,950,365). Gilding teaches preparing a wire bonding capillary by providing a wire bonding capillary for pressing wire against an electrode pad comprising a capillary tip having a pressing face (Figure 3, item 13); and coating part of the face with face of the tip is coated with a layer of Nickel or gold (Figure 3, Item 14 and Column 5, Lines 25-34), Gilding does not teach the coating to be poly-p-xylylene. Evans teaches using a the use of a poly-p-xylene (Column 3, Line 59 to Column 4, Line 30). It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the coating of Gilding with the parylene coating in order to obtain good corrosion resistance (see Evans column 3, Lines 59-65).

Response to Arguments

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., applying paraylene to prevent cracking across the entire surface of the tip of a wire bonding capillary) are not recited in the rejected claim(s). Although the claims are interpreted in light of the

Application/Control Number: 10/083,588

Art Unit: 1725

specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to applicant's argument that the parylene coating inhibits the buildup of contaminant deposits on the surface of the tip and bore of a wire bonding capillary, the fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

When an applicant submits evidence traversing a rejection, the examiner must reconsider the patentability of the claimed invention. The ultimate determination of patentability must be based on consideration of the entire record, by a preponderance of evidence, with due consideration to the persuasiveness of any arguments and any secondary evidence. In re Oetiker, 977 F.2d 1443, 24 USPO2d 1443 (Fed. Cir. 1992). The submission of objective evidence of patentability does not mandate a conclusion of patentability in and of itself. In re Chupp, 816 F.2d 643, 2 USPO2d 1437 (Fed. Cir. 1987). Facts established by rebuttal evidence must be evaluated along with the facts on which the conclusion of a prima facie case was reached, not against the conclusion itself. In re Eli Lilly, 902 F.2d 943, 14 USPQ2d 1741 (Fed. Cir. 1990). In other words, each piece of rebuttal evidence should not be evaluated for its ability to knockdown the prima facie case. All of the competent rebuttal evidence taken as a whole should be weighed against the evidence supporting the prima facie case. In re Piasecki, 745 F.2d 1468, 1472, 223 USPQ 785, 788 (Fed. Cir. 1984). In the instant case, although applicant has submitted photomicrographs showing the cracks are not confined to just the surface of the tip, the examiner does not believe this overcomes the strong motivation to combine Gilding in view of Evans. As

Application/Control Number: 10/083,588

Art Unit: 1725

stated in the previous office action, although Evans is silent with respect to the temperatures exposed to the parylene coating, Evans does explain that "the outer parylene layer is almost immediately worn off the surface of the substrate." (Evans; column 4, Lines 15-17). Evans, however, finds that a residual paraylene coating can still be found in surface defects, which unexpectedly prevents air and moisture from reaching the surface of the blade or drill bit (column 4, lines 20-30). Therefore, as stated in the previous office action, it would have been obvious to one of ordinary skill in the art at the time of the invention to replace the coating of Gilding with the parylene coating in order to obtain good corrosion resistance (see Evans column 3, Lines 59-65). The rejection is maintained despite applicant's traversal.

Conclusion

This is a RCE of applicant's earlier Application No. 10/083,588. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Page 5

Application/Control Number: 10/083,588

Art Unit: 1725

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Johnson whose telephone number is 703-308-0667. The examiner can normally be reached on M-Th 7AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on 703-308-3318. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
